

Talcott Mountain
SCIENCE CENTER & ACADEMY

What are YOU doing this April Break?

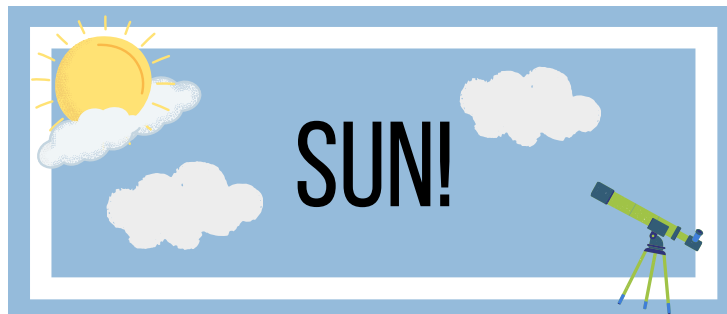

Join us at Talcott Mountain Science Center!

Grades K-3

Want to learn more about the little creatures that run the world? During this program students will get hands-on experience with insects, crustaceans, reptiles, and more!

We will do plenty of fun crafty projects, explore the miniature world of pond water, and learn to safely handle our unusual class pets. We will spend plenty of time outdoors, weather permitting!

Grades K-3

The Sun gives us light and warmth, but how much do we really know about it? In this illuminating program, you can use the Sun to make art, tell time, cook s'mores and produce electricity! See sunspots on the Sun's surface, and view our nearest star up close through a variety of telescopes and projectors.

Grades 4-8

There are hidden treasures waiting to be found in the mountains, forests, waterways, deserts, cities, or parks near you. High-tech hide-and-seek, a modern scavenger hunt, and this year celebrates 22 years since it's inception. Around the world, individuals/teams have hidden "caches" of items, and it is your job to find them! Learn GPS, and create and find caches. This game makes you the search engine!

Grades 4-8

Have you ever wondered why tsunamis are so destructive? Or how seismologists pinpoint exactly where an earthquake originated? Students will answer these questions and more during our Natural Hazards program. We will also experiment with different kinds of volcanic eruptions, so prepare to get a little messy!

April 11 - 14 | 9 am - 4 pm

Non-Members \$240 | TMSC Members \$220
